I am working on a function that enables the user to check a single student's assessment result. I use try and catch, but when I run the code, the system runs directly to the catch part, and the file's content is blank. I am not sure the reason about this problem. Here is my code:

▼
★

```
System.out.println("\n" + "Please enter the Student's uni that you would like to call. Type 'exit' to leave");
String studentInfo = s.nextLine();
if (studentInfo.equalsIgnoreCase("exit")) {
    userSelection = "exit";
}
```

```
boolean studentFound = false;
for (int i = 0; i < students.size(); i++) {

    if (studentInfo.equalsIgnoreCase(students.get(i).getStudentUI())) {
        studentFound = true;

        try {
            File singleStudentList = new File(studentInfo + ".txt");
            PrintWriter writer = new PrintWriter(singleStudentList);

            System.out.println(studentUnilists.get(i));

            writer.println(studentUnilists.get(students.indexOf(studentInfo)));
            writer.close();
        } catch (Exception e) {
            System.out.println("Problem writing the file. Please make sure the path is correct")
        }
    }
}
```

Thanks for helping!
