

Can I personalize the placement of nodes (vertex) in a network?

I'm currently conducting some social network analysis using the `igraph` package in R, and I wanted to know if there is a way to personalize the placement of nodes in the social network.

For example, with the following toy code:

```
library(igraph)
edge <- cbind(c(1,1,1,2,2,3,3,3,4),c(2,3,4,3,4,1,2,4,2),c(1,1,1,1,1,1,1,1,1))
vertex <- c(1,2,3,4)
g <- graph.data.frame(edge, directed=FALSE, vertices=vertex)
plot(g)
```

In this case, the network is kind of small compared to the plot space. Is there a way I can increase the distance between nodes? And, additionally, is it possible to position a node in a specific place (e.g. (x,y))?

Thank you!

r igraph
